 or Econ 3036 -Radical Economics (3 cr)
 Economics electives at 3xxx or above (15 cr)

Bachelor of Arts in Economics:

Economics is the study of social, business, and individual decision making and the goals, incentives, institutions, and constraints affecting those decisions. The Department of Economics curriculum combines the classical liberal arts and modern quantitative approaches.

The BA prepares students for careers in business and government, the study of law, and graduate work in economics, management, public policy, and related fields. Business careers requiring the analytical training of an economist include banking, management, insurance, marketing research, and securities trading. Economists who work for government agencies assess economic conditions in the United States and abroad and predict the economic impact of specific changes in legislation or public policy. Government careers include those in foreign and intelligence service, regulatory agencies, and international trade.
